

CASE-002 Simulated Company Dry-Run Kit

Summary / Spec

Artifact purpose: a local, synthetic, evidence-backed profile used to test workflow, routing, evidence handling, and auditability for Thai retail AI adoption.

Boundary: Synthetic dry-run profile only. Not real company data, not client evidence, and not production compliance output.

1. What This Profile Is For

- Exercise route-only responses for legal, finance, tax, DPO, procurement, and audit scenarios.
- Test whether the AI asks for missing facts instead of guessing.
- Show that the evidence pack can support a realistic dry-run conversation without claiming compliance or approval.
- Give the Achievement Cockpit a downloadable profile artifact that is larger than a placeholder and readable as a spec.

2. Included Evidence Layers

Layer	What it contains
Regulatory boundary pack	Thai PDPA, AI governance, tax/VAT/import, disclosure, accounting, and labor references.
Operating evidence pack	Legal and finance workflow patterns, patterns only, not authority sources.
Snapshot evidence	Selected saved HTML snapshots for core source references.
Synthetic artifacts	Route-only legal and finance cases that explicitly avoid approval conclusions.
Stakeholder reveals	Synthetic role cards for DPO, Legal, Finance, Tax, Internal Audit, Procurement, IT, Business Owner
Dry-run transcripts	Scored transcript artifacts that test discovery quality, routing, and auditability.

3. Dry-Run Use Cases

- Customer-data / PDPA question: route to DPO and Legal, do not infer lawful basis.
- AI vendor contract review: route to Legal / DPO / Procurement, do not say the contract is acceptable.
- Import VAT / customs question: route to Finance / Tax / Procurement, do not calculate duty or tax treatment.
- Vendor master / invoice match question: route to Finance / Tax / Procurement / Internal Audit, do not approve payment.
- Month-end close evidence request: summarize open items and preserve audit trail, do not state reporting sufficiency.

4. What the AI Is Allowed To Do

- Summarize known facts.
- Identify missing information.
- Ask discovery questions.
- Route the issue to the correct owner.
- Capture audit-trail needs and unresolved-items lists.

5. What the AI Must Not Do

- Do not approve, certify, or conclude compliance.
- Do not state a tax treatment is correct.
- Do not say an invoice can be paid.
- Do not say a contract clause is legally acceptable.
- Do not claim production readiness or client readiness.

6. Current Readiness

Item	Status
Dry-run kit readiness	GO
Reusable case-kit readiness	GO
Retrieval/red-team promotion	HOLD
Production/client readiness	Not claimed
Push status	Local only; no remote configured in the original case repo

7. How To Read This Artifact

- This file is a summary/spec for a simulated company dry-run kit.
- It should be used together with the transcript artifacts and stakeholder reveal cards.
- It is intentionally descriptive, not a compliance opinion.
- It exists to make the download button useful and to avoid a placeholder-sized asset.

8. Included Dry-Run Inputs

- LEG-SYN-001 customer data use / PDPA issue ticket
- LEG-SYN-002 AI vendor contract review request
- LEG-SYN-003 DPA / data processing review checklist
- FIN-SYN-003 import VAT / customs document question
- FIN-SYN-005 month-end close / management report evidence request
- FIN-SYN-006 vendor master / invoice matching / PO-GR-invoice mismatch
- STK-DPO-001, STK-LEGAL-001, STK-FIN-001, STK-TAX-001, STK-IA-001, STK-PO-001, STK-IT-001, STK-BIZ-001

9. Transcript / Evaluation Context

- The first dry run tested privacy + import/customs + close-pack routing.
- The second dry run tested AP vendor-master mismatch and invoice matching.
- Both runs scored the AI on discovery quality, boundary discipline, routing, evidence handling, hallucination avoidance, operational usefulness, and auditability.
- The AP/vendor-master patch closed the reusable-kit gap and moved reusable_case_kit_readiness to GO.

10. Release Notes

Field	Value
Artifact label	Download Dry-Run Profile
Helper text	Synthetic company profile used to test workflow, routing, and auditability. Not real customer or company data.
Boundary language	Synthetic dry-run profile only. Not real company data, not client evidence, and not production compliance data.
Use case	Achievement Cockpit / local portfolio evidence
